01-NOV-1998 (TrEMBLrel. 08, Last sequence update)
05-UTL-2004 (TrEMBLrel. 27, Last annotation update)
Hypothetical protein Ti611.160 (Artq33670/Ti611 160) (L-galactose dehydrogenase) (Hypothetical protein Artq33670)
Name=Ti611.160; Synonyme=Artq33670, L-GalDH;
Arabidopsis thaliana (Mouse-ear cress).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ð
                                                                                                                                                                                                                                                                                                The present invention relates to an isolated protein having L-galactose dehydrogenase (L-galDH) biological activity. L-galDH nucleic acid is useful for generating transgenic organisms and modified pants with enhanced ability to synthesise ascorbic acid. L-galDH facilitate the production of a plant that has been genetically modified to express a mutated L-galDH protein which is resistent to herbicides that act against the naturally occurring L-galDH and to identify and/or design compounds that are inhibitors of L-galDH and to identify and/or design compounds herbicide which acts on L-galDH and damages or kills plants that express the enzyme. The present sequence is Arabidopsis thaliana L-galactose dehydrogenase (L-galDH) CDNA. The L-galDH gene is located on chromosome 4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120

        comprishing an ascorbic acid precursor, thus forming ascorbic acid, and isolating the ascorbic acid. Also include are stabilising ascorbic acid or its salt in a medium, by culturing a yeast in a medium comprising ascorbic acid or its salt and a recombinant yeast functionally transformed with a coding region encoding a protein having an enzyme activity selected from L-galactose dehydrogenase (IGDH), L-galactono-1, 4-lactone dehydrogenase (ALD). D-arabinose dehydrogenase (ALD), D-arabinose dehydrogenase (ALD), D-arabinose dehydrogenase (ALD) activity, where the recombinant yeast is capable of converting to ascorbic acid at least about 23% ascorbic acid precursor or is capable of producing at least 20 mg ascorbic acid precursor or is capable of producing at least 20 mg ascorbic acid precursor. The ascorbic acid preduced (Witemin C) is a powerful antioxidant, a deficiency of which causes scurvy in humans. The present sequence encodes

The invention relates to 17880 cotton expressed sequence tags (ESTB;
ACNA5220-ACN63099). The ESTB were isolated from cDNA libraries generated
from primed or non-primed seeds from varitety DPSOB, mature seeds from
variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium
variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium
crassies, developing fibres, carpel walls and septa from variety
Nucotton3B. The invention also relates to substantially purified
cromprising a mucleic acid of the invention. The cotton ESTB are useful as
comprising a mucleic acid of the invention. The cotton ESTB are useful as
comprising a mucleic acid of the invention. The cotton ESTB are useful as
comprising a nucleic acid of the invention. The cotton ESTB are useful as
comprising a nucleic acid of the invention. The motleic acid molecules may be
comprised with plant genetic regions, to isolate genes to mappoil can detabolic and catabolic pathways. The nucleic acid molecules may be
used for isolating a variety of agronomically significant genes are
clinks in metabolic and catabolic pathways. The nucleic acid molecules are
also useful for identifying genes important in initiating and maintaining
seed germination or that may be used to mitigate stresses encountered
also useful for identifying genes integet stresses encountered
curing seed germination. The ESTB additionally enable the acquisition of
promoters and cis-regulatory elements which will be useful to express
comprised by permits the acquisition of molecules markers useful in
significant genes. The nucleic acid molecules are further useful for
detecting the expression level or pattern of a protein or mikha and for
detecting the presence or quantity of a protein or mikha and for
detecting the presence or quantity of a protein or mikha protein or present
cotton variety DPSOB primed seed cDNA library (LiBisd25). The sequence

```

New isolated nucleic acid molecule that encodes a plant protein or its fragment, useful for isolating a variety of agronomically significant genes associated with plant growth, quality or yield, and as molecular tags to map genes.

Claim 1; SEQ ID NO 3555; 34pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      42
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   43 ArgGluAlaPheArgLeuGlyIleAsnPhePheAspThrSerProTyrTyrGlyGlyThr 62
                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABBS7377-ABB72072). The sequence data for this patent did not form part of printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AlaGluArgValArgLysSerIleAspGluSerLeuGluArgLeuGlnLeuAspTyrVal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   23 AlaSerProLeuGlySerValPheGlyProValAlaGluAspAspAlaValAlaThrVal
